(54) Title: RESIDUAL STRESSES IN EXPANDABLE TUBULAR CASING

(57) Abstract: An elongated section of steel tubing (30) has an outer circumferential surface and an inner circumferential surface defining an elongated axial passage through the tubing. An expansion mandrel (10) is moved through the tubing for radially expanding the tubing. An impact member (40) is provided for travel through the length of the axial passage. A plurality of movable impactors (42) are mounted to extend from the impact member. The impactors are driven for repeated contact with the inner circumferential surface as the impact member is moved through the tubing subsequent to the expansion mandrel for contacting the expanded inner circumferential surface along the entire length of the axial passage. Movement of the impactors is ultrasonic.

Declaration under Rule 4.17:

of inventorship (Rule 4.17(iv)) for US only

[Continued on next page]

(54) Title: RESIDUAL STRESSES IN EXPANDABLE TUBULAR CASING

(57) Abstract: An elongated section of steel tubing (30) has an outer circumferential surface and an inner circumferential surface defining an elongated axial passage through the tubing. An expansion mandrel (10) is moved through the tubing for radially expanding the tubing. An impact member (40) is provided for travel through the length of the axial passage. A plurality of movable impactors (42) are mounted to extend from the impact member. The impactors are driven for repeated contact with the inner circumferential surface as the impact member is moved through the tubing subsequent to the expansion mandrel for contacting the expanded inner circumferential surface along the entire length of the axial passage. Movement of the impactors is ultrasonic.

WO 2004/026017 A3 IIII

AMENDED CLAIMS

[received by the International Bureau on 27 July 2004 (27.07.04); new claims 24-49; remaining claims unchanged 1-23 (4 pages)]

moving an expansion mandrel through the tubing for radially expanding the tubing, the mandrel combined with the impact member so that the impactors contact the inner circumferential surface along the length of the axial passage after expansion.

21. An apparatus for treating steel tubing comprising:

an elongated section of steel tubing having an OD and an ID defining an elongated axial passage through the tubing; and

an impact member movably positioned in the passage, the impact member including means for impacting the ID of the tubing sufficient to increase negative tensile residual stress at the ID.

22. A method for treating steel tubing comprising:

providing an elongated section of steel tubing having an OD and an ID defining an elongated axial passage through the tubing; and

moving an impact member through the passage for impacting the ID of the tubing sufficient to increase negative tensile residual stress at the ID.

23. A method for treating steel tubing comprising:

manufacturing an elongated section of steel tubing having an OD and an ID defining an elongated axial passage through the tubing; and

positioning and moving a mandrel through the passage sufficient to increase negative tensile residual stress at the ID.

- 24. An apparatus for treating a wellborc casing positioned within a wellbore that traverses a subterranean formation, comprising:
 - a support member adapted to extend into the wellbore casing;
 - an impact member coupled to the support member;
- a plurality of movable impactors mounted to extend from the impact member; and an impact driver connected to move the impactors into repeated contact with an interior surface of the wellbore casing which circumferentially surrounds the impact member.
- 25. The apparatus of claim 24 wherein the impactors are reciprocally movable.
- 26. The apparatus of claim 24 wherein the impact member is rotatably movable.
- 27. The apparatus of claim 24 wherein the movement of the impactors is ultrasonic.
- 28. A method for treating a wellbore casing positioned within a wellbore that traverses a subterranean formation, comprising:

WO 2004/026017 PCT/US2003/025742

impacting an interior surface of the wellbore casing to adjust residual stresses within the wellbore casing.

- 29. The method of claim 28 further comprising:
- reciprocally impacting an interior surface of the wellbore casing to adjust residual stresses within the wellbore casing.
- 30. The method of claim 28 further comprising:
- rotatably impacting an interior surface of the wellbore casing to adjust residual stresses within the wellbore casing.
- 31. The method of claim 28 further comprising:
- ultrasonically impacting an interior surface of the wellbore casing to adjust residual stresses within the wellbore casing.
- 32. An apparatus for treating a wellbore casing positioned within a wellbore that traverses a subterranean formation, comprising:
 - an impact member;
 - a plurality of movable impactors mounted to extend from the impact member;
- an impact driver connected to move the impactors into repeated contact with an interior surface of the wellbore easing circumferentially surrounding the impact member;
- an expansion device coupled to the impact member movable along the interior surface for radially expanding the wellbore casing, and
- the impact member positioned to follow the expansion device through the wellbore casing,
- 33. The apparatus of claim 32 wherein the impact member is in a housing separate from the expansion device.
- 34. The apparatus of claim 33 wherein the impactors reciprocate radially from the housing.
- 35. An apparatus for treating steel tubing comprising:
 - an impact member;
 - a plurality of movable impactors mounted to extend from the impact member,
- an impact driver connected to move the impactors into repeated contact with an interior surface of the tubing circumferentially surrounding the impact member; and
- an expansion device combined with the impact member and movable along the interior surface for radially expanding the tubing.

WO 2004/026017 PCT/US2003/025742

36. The apparatus of claim 35 wherein the expansion device and the impact member are in a common housing.

- 37. The apparatus of claim 36 wherein the impactors reciprocate from the housing.
- 38. The apparatus of claim 35 wherein the steel tubing comprises:
 a wellbore casing positioned within a wellbore that traverses a subterranean formation.
- 39. A method for treating a wellbore casing positioned within a wellbore that traverses a subterranean formation, comprising:

providing an impact member for travel through the wellbore casing;

mounting a plurality of movable impactors to extend from the impact member;

driving the impactors for repeated contact with an inner circumferential surface of the wellbore casing;

moving an expansion device through the wellbore easing for radially expanding the expansion device;

- moving the impact member through the wellbore easing subsequent to the expansion device so that the impactors contact the expanded inner circumferential surface along the length of the wellbore easing.
- The method of claim 39 further comprising:
 providing a housing for the impact member.
- The method of claim 40 further comprising:
 reciprocating the impactors radially from the housing.
- 42. The method of claim 40 further comprising: rotating the impact member.
- 43. The method of claim 40 further comprising: reciprocating the impact members and rotating the housing.
- 44. A method for treating a wellbore casing positioned within a wellbore that traverses a subterranean formation, comprising:

providing an impact member for travel through the length of the wellbore casing; mounting a plurality of movable impactors to extend from the impact member; WO 2004/026017 PCT/US2003/025742

driving the impactors for repeated contact with an inner circumferential surface of the wellbore casing; and

- moving an expansion device through the wellbore easing for radially expanding the wellbore easing, the expansion device combined with the impact member so that the impactors contact the inner circumferential surface along the length of the wellbore easing after expansion.
- 45. An apparatus for treating a wellbore casing positioned within a wellbore that traverses a subterranean formation, comprising:
- an impact member movably positioned in the wellbore casing, the impact member including means for impacting the ID of the wellbore casing sufficient to increase negative tensile residual stress at the ID.
- 46. A method for treating a wellbore easing positioned within a wellbore that traverses a subterranean formation, comprising:
- moving an impact member through the wellbore easing for impacting the ID of the wellbore easing sufficient to increase negative tensile residual stress at the ID.
- 47. A method for treating a wellbore casing positioned within a wellbore that traverses a subterranean formation, comprising:
- positioning and moving an expansion device through the wellbore casing sufficient to increase negative tensile residual stress at the ID.
- 43. A method for treating a wellbore casing positioned within a wellbore that traverses a subterrancen formation, comprising: radially expanding and plastically deforming the wellbore casing within the wellbore; and adjusting residual stresses within the radially expanded and plastically deformed wellbore casing.
- 49. A system for treating a wellbore casing positioned within a wellbore that traverses a subterranean formation, comprising:
- means for radially expanding and plastically deforming the wellbore casing within the wellbore; and means for adjusting residual stresses within the radially expanded and plastically deformed wellbore casing.
